The Science of Learning: 99 Studies That Every Teacher Needs to Know 2nd Edition

by Edward Watson (Author), Bradley Busch (Author)

4.4 ★★★★½ 133 ratings 4.3 on Goodreads 25 ratings

See all formats and editions

Supporting teachers in the quest to help students learn as effectively and efficiently as possible, *The Science of Learning* translates 99 of the most important and influential studies on the topic of learning into accessible and easily digestible overviews. Building on the bestselling original book, this second edition delves deeper into the world of research into what helps students learn, with 22 new studies covering key issues including cognitive-load theory, well-being and performing well under exam pressure.

Demystifying key concepts and translating research into practical advice for the classroom, this unique resource will increase teachers' understanding of crucial psychological research so they can help students improve how they think, feel and behave in school. From large- to small-scale studies, from the quirky to the iconic, the book breaks down complicated research to provide teachers with the need-to-know facts and implications of each study. Each overview combines graphics and text, asks key questions, describes related research and considers implications for practice. Highly accessible, each overview is attributed to one of seven key categories:

- Memory: increasing how much students remember

- "You aren't assessing. Not really."

INTRODUCTIONS:

TALK WITH A NEIGHBOR:

- How could you make it better?

TRANSLATING: BAD TO GOOD

Problems:

1. Time to watch
2. Too many cooks/group work problems
3. Too long
4. Don’t last
5. Student engagement
6. Feedback quality
7. Inauthentic

Solutions:

1. Put them on YouTube
2. Individual assignment
3. Make them 5 minutes
4. Add them to course textbook
5. Each student must watch 3 as HW
6. Must provide feedback (ask about FF!)
7. See #4

Benjamin Pacini - 9/11/2024: About That Group Presentation

There's this weird thing where teachers are all...

google.com

MY FAVE THREE: ORAL EXAM

Oral Exam

- Complete readings
- Shallow or deep
- Whence collaboration?
- Socratic Seminar
- Student graded

MY FAVE 3: CONSULTANCY PROJECT

Students aren't students!
They're ninja consultants!

- Give me feedback
- Allowed to give surveys
- Have to make charts
- Have to tell me one thing they would improve

INTRODUCTIONS:

MY FAVE THREE: RESEARCH SEM.

- Hard text
- 30 minutes to read
- 30 minutes to discuss
- No stakes. Just try.
- Teacher models/guides.
- Can do out of class.
- Can integrate, too.

Constructivism in the Classroom: Epistemology, History, and Empirical Evidence

By William J. Matthews

Over the previous two decades the emergence of post-modernist thought (i.e., radical constructivism, social constructivism, deconstructivism, post-structuralism, and the like) on the American intellectual landscape has presented a number of challenges to various fields of intellectual endeavor (i.e., literature, natural science, and social science) (Matthews, 1998; in press). Nowhere is this challenge more evident and therefore more problematic than in the application of post-modernism (in the form of constructivist teaching) to the classroom. Employing constructivist teaching practices is problematic at two levels: (1) there is an absence of empirical evidence of effectiveness; and (2) employing this approach for which there is a lack of evidential support, means not employing instructional practices for which there *is* empirical support. The purpose of this article is to present an overview and critique of constructivist teaching practices, followed by a brief review of evidenced-based practices in teaching.

William J. Matthews is a professor in the School Psychology Program of the School of Education at the University of Massachusetts, Amherst, Massachusetts.

What is Constructivism?

There are numerous variations and definitions of post-modernist thought of which constructivism is a

Diversity in Schools: Immigrants and the Educational Performance of U.S. Born Students

David N. Figlio, Paola Giuliano, Riccardo Marchingiglio, Umut Özek & Paola Sapienza

WORKING PAPER 28596 DOI 10.3386/w28596 ISSUE DATE March 2021

We study the effect of exposure to immigrants on the educational outcomes of US-born students, using a unique dataset combining population-level birth and school records from Florida. This research question is complicated by substantial school selection of US-born students, especially among White and comparatively affluent students, in response to the presence of immigrant students in the school. We propose a new identification strategy to partial out the unobserved non-random selection into schools, and find that the presence of immigrant students has a positive effect on the academic achievement of US-born students, especially for students from disadvantaged backgrounds. Moreover, the presence of immigrants does not affect negatively the
