Subject: Re: Course Observation

No worries. I probably should have sent you my zoom room either way.

The observation information from your class is below. I'd be happy to talk through any of the items. Most of it is just data/observations.

Speaking Time

Instructor: 47:12

Students: 18:13

Questions

Instructor Questions: 79 (10 of these came before class even began)

Student Questions: 16

Time spent on activities

Intro game for names 5 mins

Praise activity – 6 mins “shout out” vs “call out”

12:43 begin directions exam – placed a timer on the screen 12:46

Chopping onions 12:56-1:02

What to call your students – friends 1:02 – 1:05

Meme 1:05 – 1:08

Words of inspiration 1:08 – 1:14

Review Chapters 1:14-1:18

Oral test - 1:19 Review of chapters -normalize the positive

Fishbowl 1:33-

Discussion Thoughts

Modelling the "how to shout out" builds rapport and gave them an opportunity to know that you are watching and recognizing their actions. It also taught about praising growth attributes which pointed them to the growth mindset you would be talking about later. Showing that you knew their names during the introduction game was a sign of caring as well.

The activities that involved moving around, sitting in a circle, or standing helped class feel exciting, kept people engaged, and provided a break point for each activity.

The actionable items and practicing what they would call their students was great. Practicing it when there was noise in the room created a more real-life situation. Helping them be intentional about each word they say in this one way will help them also want to be intentional in other ways as well.

Teaching them about growth mindset using RPGs was interesting with an all girl class. I wasn't sure how well that was going to go. I loved the analogy of leveling up stats, but I'm familiar with RPG games, so it connected with me.

I liked the video you played at the beginning as students were coming in.

I enjoyed your discussion about allowing people to grow but still holding them accountable to turn things in on time.

I enjoyed the fishbowl activity as I had never seen that done before.

There was one girl in the back that raised her hand but got missed during one of the discussions. Everyone seemed engaged in the discussions and felt comfortable sharing their thoughts.

Oral Examination: Terror and Sucrose –

- Asking them if they had read and felt comfortable sharing, but still acknowledge the "terror" part of it
    - I liked that you did this. This activity made sure that they had read the material and got them comfortable being in front of people. Holding them accountable for the information is important and also key to stress its importance through modelling for future teachers. Helping them stand in front of others and answer tough questions is also a good skill for future teachers.
- Had key points from the reading to test recall
    - I felt that those who weren't in the front were still invested to know if they got the question correct. I could see those in the class looking for answers. Only doing a few questions allowed you to control what areas got emphasis from the text, while still allowing the students to present their ideas.
- Rephrased questions if they didn't get to an answer immediately
    - There were a couple of times where the student didn't answer quickly and you rephrased to help them find the path to the answer.
- Allowed them an opportunity to search for the answer to improve.
    - The final question you allowed them to search for an answer so they still found success and could fill in the gap in their knowledge.

Prior to Class

I talked with a student who showed up early (so there may be some bias to the answer) about you and your class. Here are her observations:

About the class:

Fun, loves the class, great teacher

About you:

Expects a lot from us. Tells us bluntly – no wiggle room – tells it as it is

Very open – not rude, get to hear the good and other things to work on

What do you like about class?

Fun memes at the beginning of class

Allows us to discuss a lot

Lots of reading

Figure out our own opinions, shares his but lets us come up with our own opinions

Allows us to message him via Zoom channel

Likes that you message quickly or at least by the next day

We can ask anything – he answer quickly. I don't have a lot of time because assignments are due soon, so quick response is critical

Large group room chat via zoom. Likes this

Let us know when he'll be there or film (for the practicum)

Office at the beginning of semester – asked how he could help out, got to know them and their workload

She liked that you come visit even if not our "observation time" when you are at the school

Hopefully this information is beneficial in some way. I feel like I got a lot out of the class and really enjoyed your enthusiasm and engagement with your students.

Thanks for letting me observe.

I'd be happy to talk through any of my above ramblings that may not have made sense.

Thanks,

Adam

That works. Apologies again. I figure we can discuss after next week's classes both mine and yours.

This week Friday is just a work day for both of my classes. We can shoot for next week, but it will all be zoom.

It's not your fault I'm a dolt, lol. I'm going to try to get to this one, but I think I should give you a real, full observation. Sorry I'm still a mess, lol. Do you teach Friday?

Sorry, I didn't see this while I was in class. I have another one now 10:15-11:15 that can be attended via zoom or in person. If that doesn't work, I'll reach out after this class to discuss other dates/times.

Planning to come by the last class today (I had a student sign up for a time when I thought I was free, oops.) I'll be there just a hair late. Is there a zoom option, or do I need to be in person?

Subject: Course Observation

Benjamin,

Apparently, I need to be faster at sending out emails.

I have classes on Monday from 7:45-8:45, 9:00-10:00, and 10:15-11:15. The first two classes are in STC 353 and are about Web Fundamentals and the third is in STS 361 and about Web Frontend Development. All of these classes are hy-flex and will have students attending remotely as well as in-person.

I've enjoyed your comments and would love to hear your recommendations on asking better questions.

You mentioned having a class on Tuesday that I could attend. When are they, where, and what are the topics of those classes? Do you have anything in particular you'd like me to observe/count/record?

Thanks,

Adam

p.s. I hope you continue to get better. If another day is better for you to observe or be observed, let me know and we'll work it out.
