BEST COURSE THIS SEMESTER!! I have learned far more than any of my other classes! Brother Pacini has so much compassion and love for his students while he focuses on his teachings. He had great time management where as my other teachers did not. He was skilled with using zoom and other technological apps. I feel most fulfilled with my learning in this class. Thanks bropa!
Thanks for everything! I really learned a lot for you and I could tell how much you cared and how passionate you were about what we were learning.
I have really enjoy this exciting and engaging class with Brother Pacini. I have learned a-lot from the participating in this course. There were times were I was lost with a certain assignment and would have appreciated more detailed instructions. Even though this semester was all remote, I appreciated the opportunities that Brother Pacini gave students in teaching and leading discussion and lessons.
I really enjoyed it overall. All the assignments had purpose, which I really appreciated because way too many classes have busy work that doesn't help me learn or feel excited about my learning. He was very easy to get a hold of and was more than willing to work with students. Overall, I am really grateful that I now have great tools in my tool belt to take with me when I student teach.
Great motivator
So, there's obviously always something that could be better. However, when compared to other classes, this class is well put together and was well taught. So that's how I scored things. I think it was graded fairly. I do think that for the modules, instead of labeling the discussion boards by what day of class it was, it would be better to label them by the date. So instead of labeling it "Session 5," it would be easier for me to locate by "May 9 Class" or something like that. I really appreciate the office hours and the flexibility with due dates and the ability to resubmit in this class. I think the ability to resubmit matches the content of the class well because we're supposed to learn how to use the tech tools and if it takes us 2 tries, then that's fine as long as we learn how to use it.
I loved this class! I wish I could TA for this class, I was able to learn a lot and I had fun learning all of the material.
Great teacher!!!!
I loved this class but at times I struggled with a lack of direction. I never felt sure if what I was doing was enough. That being said, I really learnt a lot from this class and it allowed me to stretch myself and increase my knowledge.
This class and teacher were amazing I have learned so much from this teacher and he is the best professor I have had so far!
N/A

This class has been extremely helpful and useful for me, I would definitely take the things that I've learned in the future however, I just wished that the instructions for every project are more clear and direct and giving examples for every assignment would be very helpful.
He is a great teacher and cares so much for each of his students but it is a lot of busy work.
I felt like I learned a lot from participating in the lessons and feel like I was able to be more aware of technological devices in and out of the classroom.
This is an amazing class and Brother Pacini made it great. The course content itself was great and Brother Pacini made it even more beneficial.
Brother Pacini does a very good job of engaging students and helping them enjoy what they are learning. He has significantly increased my desire to teach.
Material could be confusing at times. Love the effort and time the teacher gives when helping students.
Sometimes instructions were very unclear, and forced me to figure out things on my own, BUT he was always ALWAYS there when I had questions. He is the one teacher I have I know I can always count on, for being WILLING to help. I feel like he actually cares about me and my success.
